

**IN THE SPECIFICATION**

Please amend the specification as follows. Replace the paragraph beginning at line 24 of page 15 with the following:

In one embodiment, low-pass filter 50 may be a passive low-pass filter that communicates ISDN signals below approximately 80KHz and attenuates XDSL signals above approximately 125KHz, although any appropriate filtering may be performed. Low-pass filter 50 may filter signals sent to ~~ISDN device 20~~ ISDN device 26 from network 30 and signals sent from ~~ISDN device 20~~ ISDN device 26 to network 30. Low-pass filter 50 may use any components appropriate for a passive low-pass filter including, but not limited to, inductors, resistors, and capacitors.
